

# All about Tractors

Tractors were first invented in 1892.

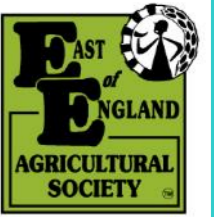

The biggest tractor in the world was built in 1977 in America and is called Big Bud.

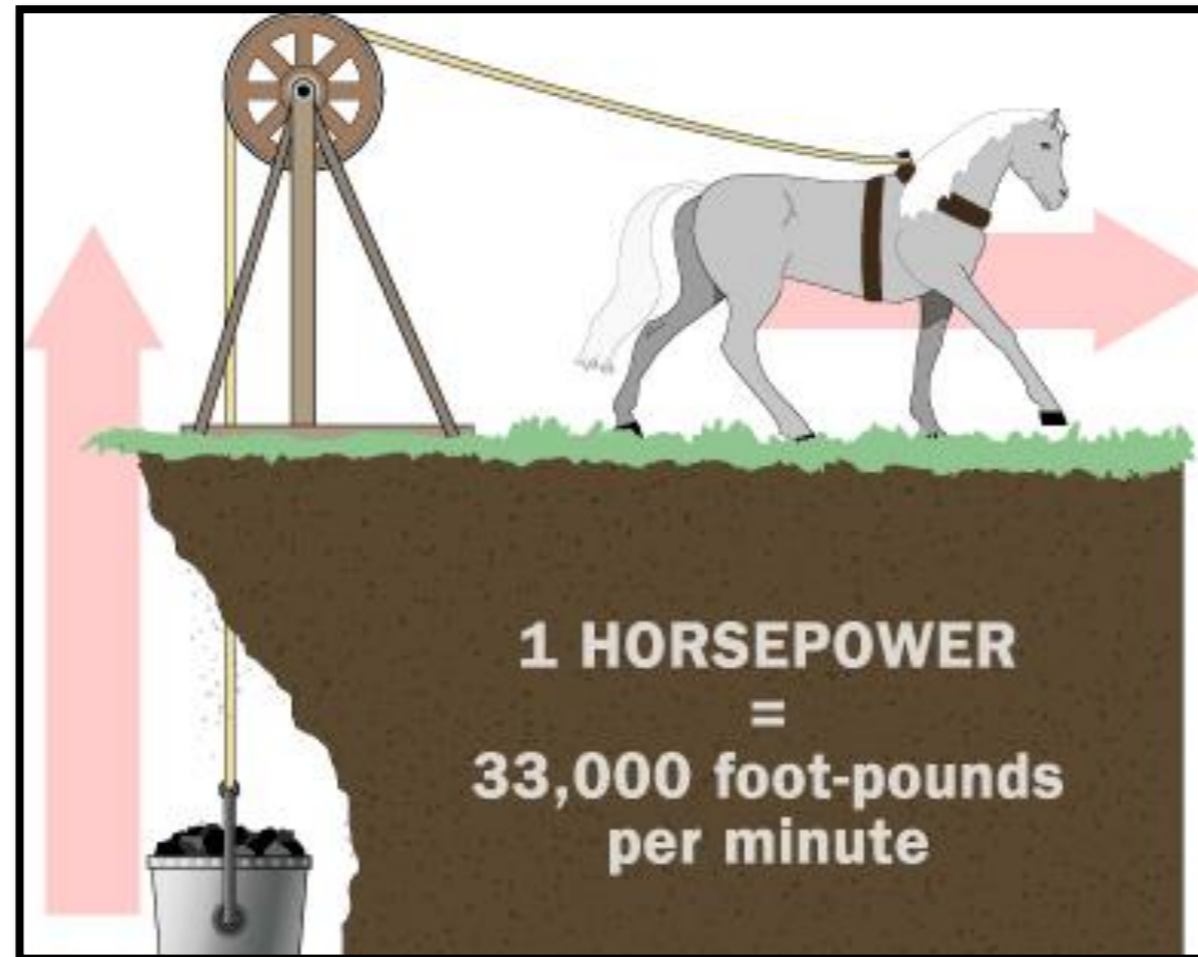

**A tractor can cost more than a small house.**

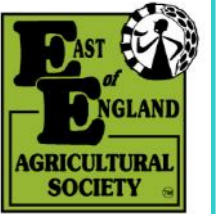

A tractor's strength is measured in horsepower.

**Modern tractors use satellites to drive them in the field.**

**Before tractors, farmers used horses to work on the land.**

**In the future tractors will be driverless**

Towing, ploughing and sowing are some of the things a tractor does

Tractors have big wheels so they can drive over obstacles

Tractors run on diesel
